

# Code Challenge I - Model Driven Form

- Create Login Component which should implement model driven form as displayed in the image. Use Bootstrap library for UI.
- Login Field – should be required and minimum 8 characters length
- Password Field – should be required and must contain at least one special character
- Proper error messages should be displayed to user for invalid values in field.
- Disable the Login button if user does not enter valid values in both the fields.

A mockup of a 'User Login' form. At the top, there is a circular profile picture placeholder with a green background and a yellow face, next to a close button (X). Below the profile picture is the title 'User Login'. The form contains two input fields: 'Enter email' and 'Password'. Below these fields is a green 'Login' button. At the bottom, there is a light blue link that says 'Forgot Password?'. The entire form is enclosed in a white box with a gray border.
